

Operator-technologist who turns emerging technology into adopted operating mechanisms. Direct experience mapping work, building AI-assisted workflows, connecting business and technical owners, defining human authority, creating standard work and training, and instrumenting outcomes across software-enabled operations.

ROLE-ALIGNED CAPABILITIES

- Workflow mapping
- AI opportunity architecture
- Agentic workflow patterns
- Python & APIs
- Human-in-the-loop design
- Adoption systems
- Operating metrics
- Cross-functional delivery
- Lean / Gemba

Vape-Jet

Director of Operations

2025–Present

- Lead AI-first operating transformation across production, purchasing, quality, customer success, support, engineering issue flow, ERP/Odoo, Jira, HubSpot, Slack, telemetry, and AI-assisted workflows.
- Connect factory, field, customer, and machine-fleet signals into prioritized work, earlier risk detection, cleaner handoffs, dashboards, standard work, training, and accountability.
- Work directly in a software-enabled robotics and machine-vision environment with approximately 1,000 fielded robots informing support and operating feedback loops.

AI OPERATING APPROACH

Start with a decision-critical workflow. Bound value, context, data, authority, risk, adoption, and ownership. Build the smallest useful intervention. Measure retained use and workflow outcome. Standardize, revise, hold, or stop based on evidence.

TECHNICAL TOOLKIT

Agentic AI · LLM workflows · RAG patterns · Human-in-the-loop design · Python · SQL · JavaScript · TensorFlow · Tableau · ERP/Odoo · Jira · Confluence · HubSpot · Slack

DudeWorth

Founder / AI and Automation Advisor

2017–Present

- Develop AI-readiness and opportunity frameworks spanning value, feasibility, data readiness, governance, adoption burden, reuse, and time-to-value.
- Design agentic workflow patterns using structured context, retrieval, AI agents, human judgment, escalation, decision records, evaluation, and governance rails.
- Advise on AI-enabled operations, logistics technology, warehouse automation, AMRs, ASRS, cobots, transportation systems, network analysis, and workflow design.

CREDENTIALS

- Google AI Essentials
- IBM Enterprise Design Thinking Practitioner
- Six Sigma Certification
- OSHA 10

Amazon

Operations Management / Site Leader

2014–2018

- Led launch and execution for Amazon Prime Pittsburgh in a 24/7 customer-backward environment supporting approximately five million second-day orders annually.
- Built leadership routines, labor planning, throughput visibility, escalation paths, standard work, and operating mechanisms.
- Applied Lean and Gemba practices across safety, quality, throughput, customer experience, and team engagement.

CANDIDATE VISION

<https://russelldudek.github.io/1Mind/>

AI OPERATIONS EVIDENCE MATRIX

Operating problem	Mechanism built or applied	Verified evidence source
Fragmented systems and handoffs	Prioritized work, dashboards, standard work, training, and accountability across Odoo, Jira, HubSpot, Slack, telemetry, and operating teams	Vape-Jet
Unbounded AI demand	Value, feasibility, data readiness, governance, adoption burden, reuse, and time-to-value qualification	DudeWorth
Scaled execution under pressure	Throughput visibility, labor planning, escalation, Lean/Gemba, and customer-backward operating cadence	Amazon

Compunetics

2000–2013

Director of Operations and Engineering Management

- Progressed through R&D program management, production management, strategic acquisition, operations management, and director-level leadership.
- Led engineering, manufacturing, quality, customer delivery, and complex technical programs in advanced electronics and high-reliability environments.
- Built quality systems, standard work, root-cause practices, performance measures, and process controls.
- Collaborated with high-consequence customers and partners including DoD, CERN, Intel, and AMD; published industry articles, delivered technical talks, and participated in the HyperTransport Consortium.

Cardinal Building Products

2021–2023

Regional Director

- Built the company's first remote regional operation.
- Modernized distributed customer, CRM, commercial, fulfillment, logistics, digital marketing, SEO, and online-buying workflows.
- Advanced AI-enhanced transportation-management and route-planning concepts.

ZeusVu

2018–2022

Chief Pilot, Autonomous Systems and Aerial Data Operations

- Led regulated drone operations across medical, energy, logistics, real-estate, and restricted-airspace contexts with a 100% safety record and no FAA incidents.
- Developed TensorFlow-based concepts for automated aerial inventory and computer-vision-enabled field intelligence.
- Designed medical drone delivery and chain-of-custody concepts connecting technology, risk, stakeholders, and governed execution.

ADDITIONAL LEADERSHIP

Enviro Social Capital — Chairman of the Board (2014–2017): Co-founded and led a public-private impact initiative focused on sustainable infrastructure, green finance, and civic transformation; helped shape and evaluate a \$200 million Social Impact Bond feasibility concept.

IEEE — CMPT and EDS Pittsburgh Chapter Chair (2012–2016): Led regional technology programming connecting industry, academia, STEM outreach, electronics, manufacturing, and emerging technology.

EDUCATION

University of Pittsburgh

Bachelor of Science

Academic grounding includes materials science, physical chemistry, and biology-related studies.

OPERATING MECHANISMS

- Workflow and decision mapping
- Opportunity registers and prioritization
- Human authority and escalation
- Standard work and playbooks
- Training and champion systems
- Dashboards and operating reviews
- Quality, root cause, and controls
- Cross-functional translation

TRANSFER TO 1MIND

Sales-first workflow observation, bounded prototyping, RevOps partnership, Engineering handoff, adoption instrumentation, and reusable operating memory across GTM and the broader company.

EVIDENCE BOUNDARY

Russell does not claim production platform-engineering ownership or career enterprise RevOps administration. His verified strength is operating architecture, direct workflow building, technical translation, adoption, governance, and measurable execution.

SELECTED OPERATING MECHANISMS

Make the work visible

Map the workflow, decision, owner, baseline, handoff, exception, and current workaround before selecting technology.

Bound human and technical authority

State what AI may do, what people retain, what escalates, and when Engineering must own reliability and integration.

Install adoption in the work

Use standard work, training, visible feedback, operating reviews, and accountable owners rather than treating launch as adoption.

Learn from evidence

Track workflow outcomes, retained use, corrections, exceptions, maintenance, and reusable patterns; revise or stop when evidence requires it.

AI OPERATING MEMORY

Turn every workflow release into reusable company learning.
